

Important to have friends . . .

Scout Camp 2009 is opened by Camp Chief Arkhip Tikhomirov

Opening words for the camp started off with a warm welcome from Arkhip who jollily declared that everyone will be properly tired out by the end of the camp and that he would make it his priority to do so. Jokes aside it was good to see so many friendly faces and much fresh blood at parade, which with our stringent safety standards we hope not to see :)

Editor's Word

This Newspaper now hires journalists within the organisation. Must be funny, witty and being able to write things people would ACTUALLY want to read!

In an event that you want to write something or place an ad in the classifieds section. Please see Artyom Laletin promptly,

Swallows as animals

For the sake of our Duty patrol, here is some information about the birds they represent.

The swallows are passerine birds in the family Hirundinidae which are characterised by their adaptation to aerial

Did you know?

These are the original words to one of our songs...

**Взвейтесь, соколы, орлами!
Взвейтесь, соколы, орлами!
Полно горе горевать!
То-ли дело, под шатрами
В поле лагерем стоять!**

**Лагерь город полотняный,
Морем улицы шумят,
Позолотою румяной
Медны маковки горят.**

**Там, едва заря настанет,
Строй пехотный закипит,
Барабаном в небо грянет
И штыками заблестит.**

**Закипит тогда войною
Богатырская игра,
Строй на строй пойдет
стеною
И прокатится Ура!**

**Все покорны Царской воле,
По отбою - кончен спор,
И на прежнем ратном поле
Песню дружно грянет хор!**

**Припев:
Взвейтесь, соколы, орлами!
Полно горе горевать.
То-ли дело, под шатрами
В поле лагерем стоят**

feeding. Swallow is used colloquially in Europe as a synonym for the Barn Swallow.

The swallows have a cosmopolitan distribution across the world and breed on all the continents except Antarctica. It is believed that this family originated in Africa as hole-nesters; Swallows are excellent fliers, and use these skills to attract a mate and to feed. Some species are territorial, whereas others are not and simply defend their nesting site.

For the most part swallows are insectivorous, taking flying insects on the wing. Across the whole family a wide range of insects are taken from most insect groups, but the composition of any one prey type in the diet varies by species and with the time of year. Individual species are selective, they do not scoop up every insect around them, but instead select larger prey items than would be expected by random sampling. They also avoid certain prey types; in particular stinging insects such as bees and wasps are generally avoided.

In addition to insect prey a number of species will occasionally consume fruits and other plant matter.

Swallows are able to produce many different calls or songs, which are used to express excitement, to communicate with others of the same species, during courtship, or as an alarm when a predator is in the area.

Because of the readiness with which some species nest in and around human settlements and buildings people have had a long experience with swallows and many myths and legends have arisen as a consequence.
